

STACKLY LAW SERVICES

Elite Legal Solutions for Modern
Businesses

Project URL: <https://nithish-raj-2000.github.io/Law-services-new/>

Prepared by : Nithish Raj M

Date: June 2026

Status: Final

1. Executive Summary

This document serves as the exhaustive architectural and functional blueprint for the STACKLY web platform.

STACKLY is positioned as an elite legal consultancy catering to modern businesses, multinational enterprises, founders, and private clients. The primary objective of the digital platform is to establish a commanding online presence, communicate domain authority in complex legal matters (including corporate law, litigation, and compliance), and provide a seamless lead-generation pipeline for high-value client acquisitions.

The current iteration of the web platform is deployed via GitHub Pages, utilizing a static multi-page architecture designed for extreme performance, security, and global accessibility. This specification outlines the current state of the application, delineates specific functional modules, provides comprehensive design guidelines, and sets the foundation for future migrations to dynamic web frameworks .

2. Introduction & Scope

2.1 Document Purpose

The purpose of this Comprehensive Web Architecture & Functional Specification is to define the technical, functional, and aesthetic parameters of the STACKLY

website. It is intended for use by front-end developers, UI/UX designers, quality assurance engineers, and project stakeholders to ensure alignment on the platform's current capabilities and future trajectory.

2.2 Target Audience

The end-users of the STACKLY platform include C-suite executives (CEOs, CFOs), General Counsels, startup founders, and enterprise board members. Consequently, the application must reflect absolute professionalism, utilizing sophisticated typography, muted color palettes, and frictionless navigation paths to cater to a time-poor, high-net-worth demographic.

2.3 In-Scope Items

- Static page architecture and routing configuration.
- Component definitions for global navigation, landing pages, and service directories.
- Performance optimization strategies and asset delivery.
- Form validation protocols for user authentication (login/signup) and contact inquiries.
- Accessibility and responsive design standards.

3. System Architecture & Technologies

The STACKLY platform currently employs a robust static-site architecture to maximize load speed and minimize server-side vulnerabilities.

3.1 Core Technology Stack

Layer	Technology	Rationale
Presentation (Markup)	Semantic HTML5	Ensures cross-browser compatibility and structural clarity for screen readers.
Styling	CSS3	Custom stylesheet implementation without heavy framework overhead to ensure unique branding.
Interactivity	JavaScript (ES6+)	Handles DOM manipulation, form validation, and lightweight animations

		without library bloat.
Hosting & Deployment	GitHub Pages	Provides globally distributed CDN capabilities, SSL/TLS out of the box, and CI/CD integration.
Asset Management	WebP Image Optimization	Images are served with dynamic parameters to drastically reduce payload sizes.

3.2 Deployment Architecture

The deployment pipeline relies on Git-based version control. Changes pushed to the main repository automatically trigger a GitHub Actions workflow that builds and deploys the static assets to the gh-pages environment. This ensures zero downtime during updates and maintains an immutable history of structural changes.

4. Information Architecture & Sitemap

A logical, flat hierarchy is implemented to ensure that users can navigate to critical conversion points (e.g., Book Consultation, Pricing) within a maximum of two clicks from the point of entry.

5. Detailed Functional Requirements

5.1 Global Navigation & Header

The header serves as the persistent anchor for the platform. It is designed to be sticky on scroll to provide continuous access to primary actions.

5.2 Landing Page Hero Section

The first visual touchpoint. Designed to establish immediate authority.

5.3 Practice Areas Grid

The core service directory on the landing page, implemented as a CSS Grid. Cards include Corporate

Law, International Arbitration, Regulatory Compliance, M&A Advisory, Commercial Litigation, and Data Privacy & Tech.

5.4 Authentication Forms (Login / Signup)

Requirement: Forms must implement client-side validation before allowing submission. If an arbitrary email or password is provided without correct formatting, a clearly observable default error message must be displayed to the user.

6. User Experience (UX) & Design Specifications

6.1 Typography Strategy

Primary Headings (H1, H2): A strong, authoritative serif or structural sans-serif font. Body Copy: Highly legible sans-serif set at a base size of 16px.

6.2 Color Palette

- Primary Brand Color: Deep Navy/Midnight Blue (#0b1d3a)
- Accent Color: Muted Gold / Brass (#c0a36b)
- Backgrounds: Crisp White (#ffffff) and Off-White/Light Slate (#f8fafc)

7. Non-Functional Requirements (NFRs)

7.1 Performance

First Contentful Paint (FCP) must occur within 1.2 seconds on a 4G mobile connection. Time to Interactive (TTI) must be under 2.5 seconds.

8. Quality Assurance & Test Cases

Rigorous testing protocols are mandatory to ensure the digital presence aligns with the firm's reputation for flawlessness. Includes navigation testing, form validation testing, performance auditing, and accessibility checks.

9. Future Roadmap & Scaling Strategy

Phase 1: Componentization (Current + 3 Months)

Phase 2: React / Next.js Migration (Current + 9 Months)

Phase 3: Headless CMS Integration (Current + 12 Months)

Phase 4: Client Portal Launch (Current + 18 Months)

10. Conclusion

The STACKLY web platform functions as a vital digital storefront, engineered to convey authority, trust, and global reach for an elite international law firm. The current deployment, utilizing a static multi-page HTML architecture via GitHub Pages, delivers extreme performance, security, and global accessibility. It effectively acts as a seamless lead-generation pipeline for high-value client acquisitions while maintaining the strict performance and accessibility standards required of a premium brand.
